

Getting the Red Out

with Photoshop Elements

By Patrick Davis

2007

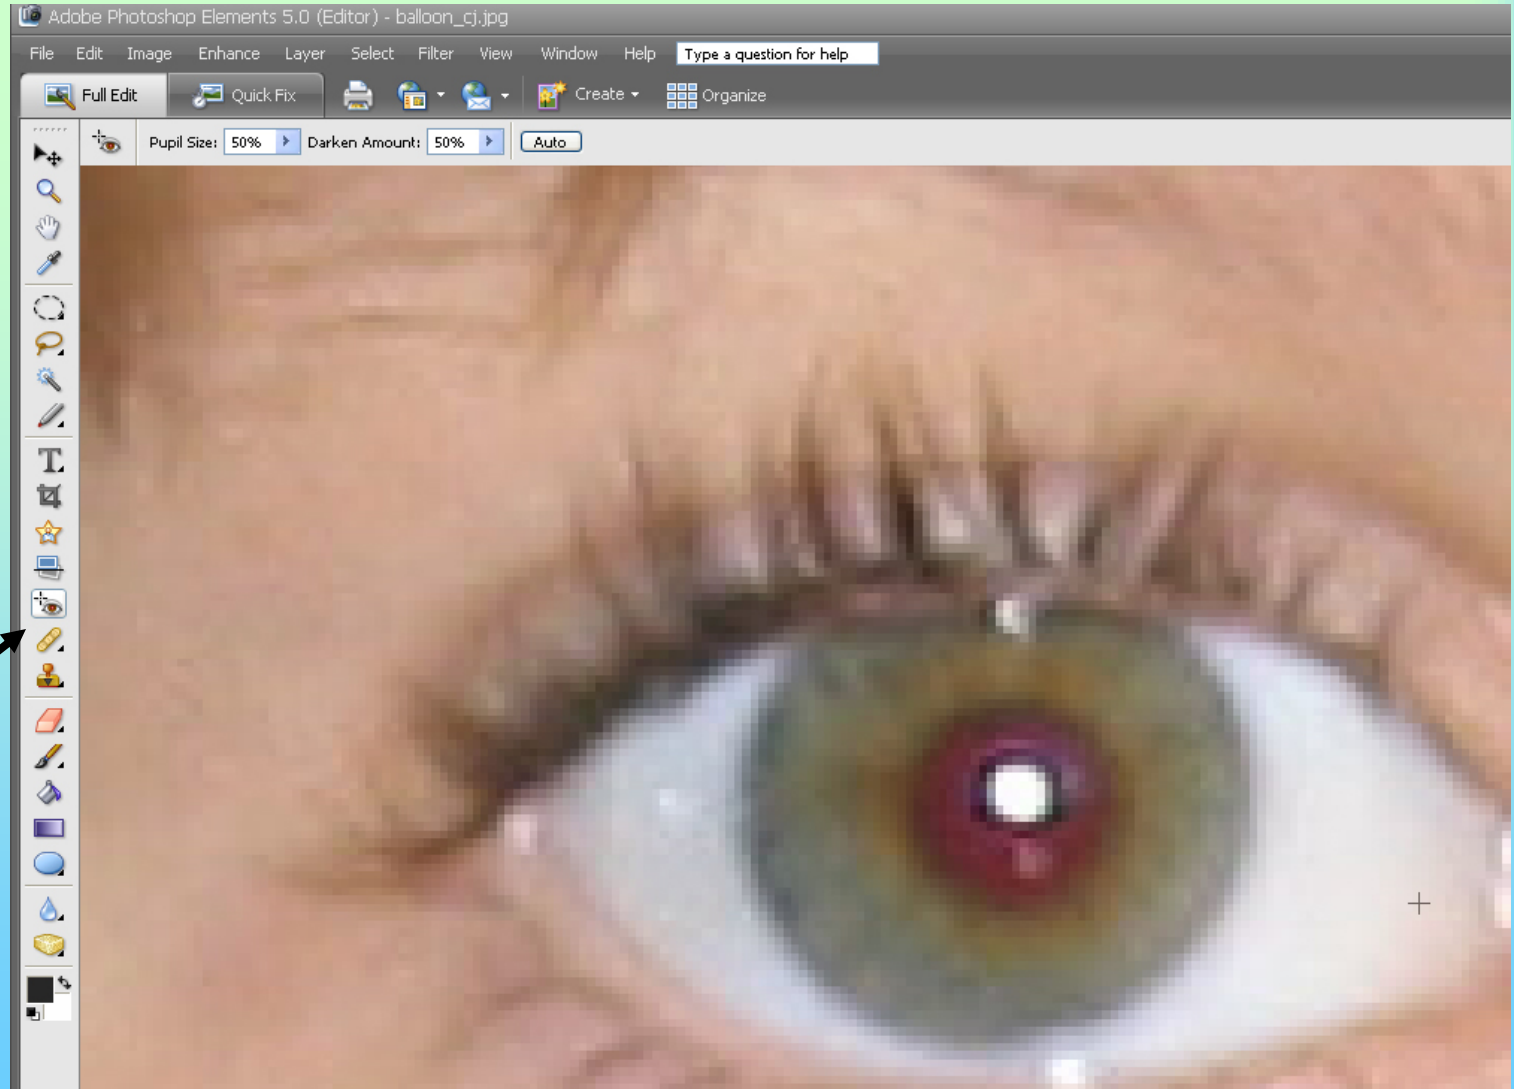

Outline of Course

- Getting red eye out
 - The easy way
- Getting the rest of the red eye out
 - Magnify the eye
 - Color selection tool
 - Replacing color

The easy fix

- Click the red eye tool in the tool palate
- Zoom in a bit on the eyes

Example

Red eye tool

The Red Eye Tool

- You may use the red eye tool in two ways
 - Draw a box around the eye and let go of your mouse (not recommended)
 - Try it and see what happens
 - Now Control-Z to back up (Edit- undo)

-or-

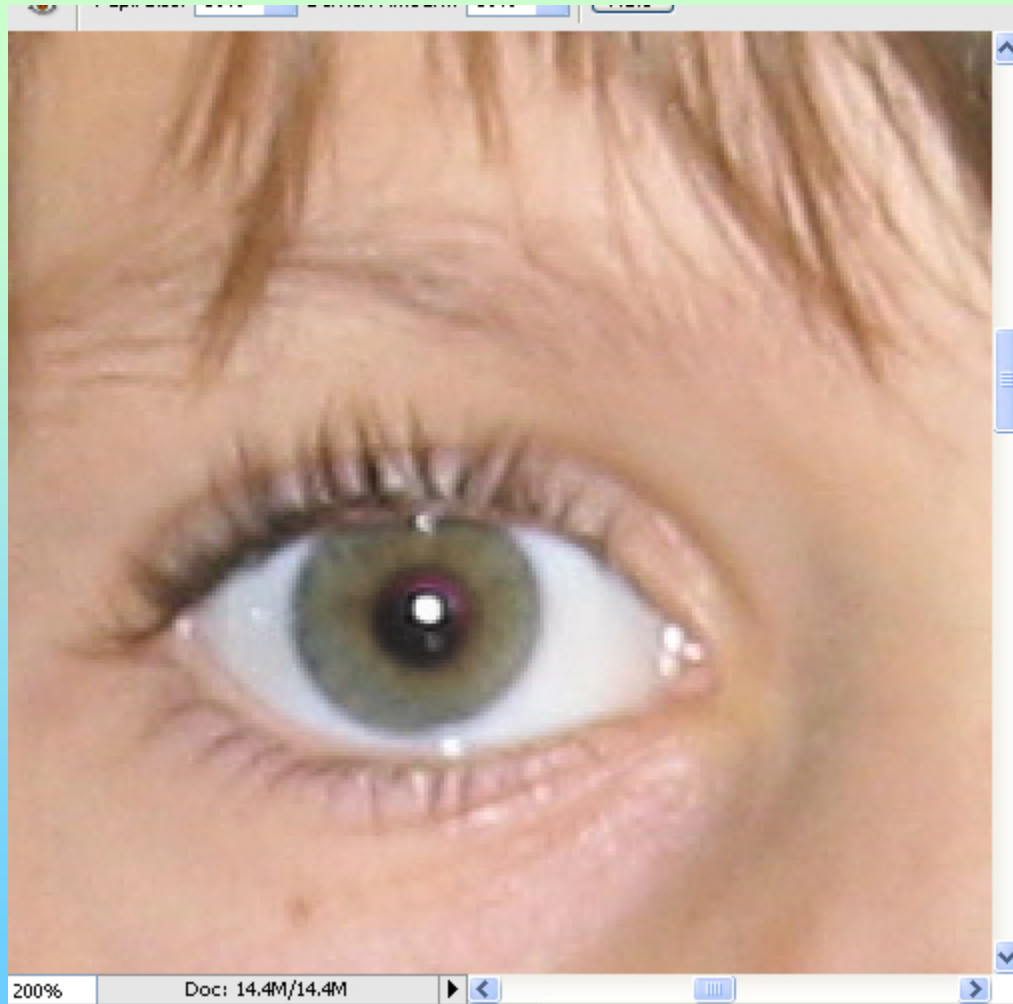

The Red Eye Tool

- Use the mouse crosshair and just click on the red part (recommended)

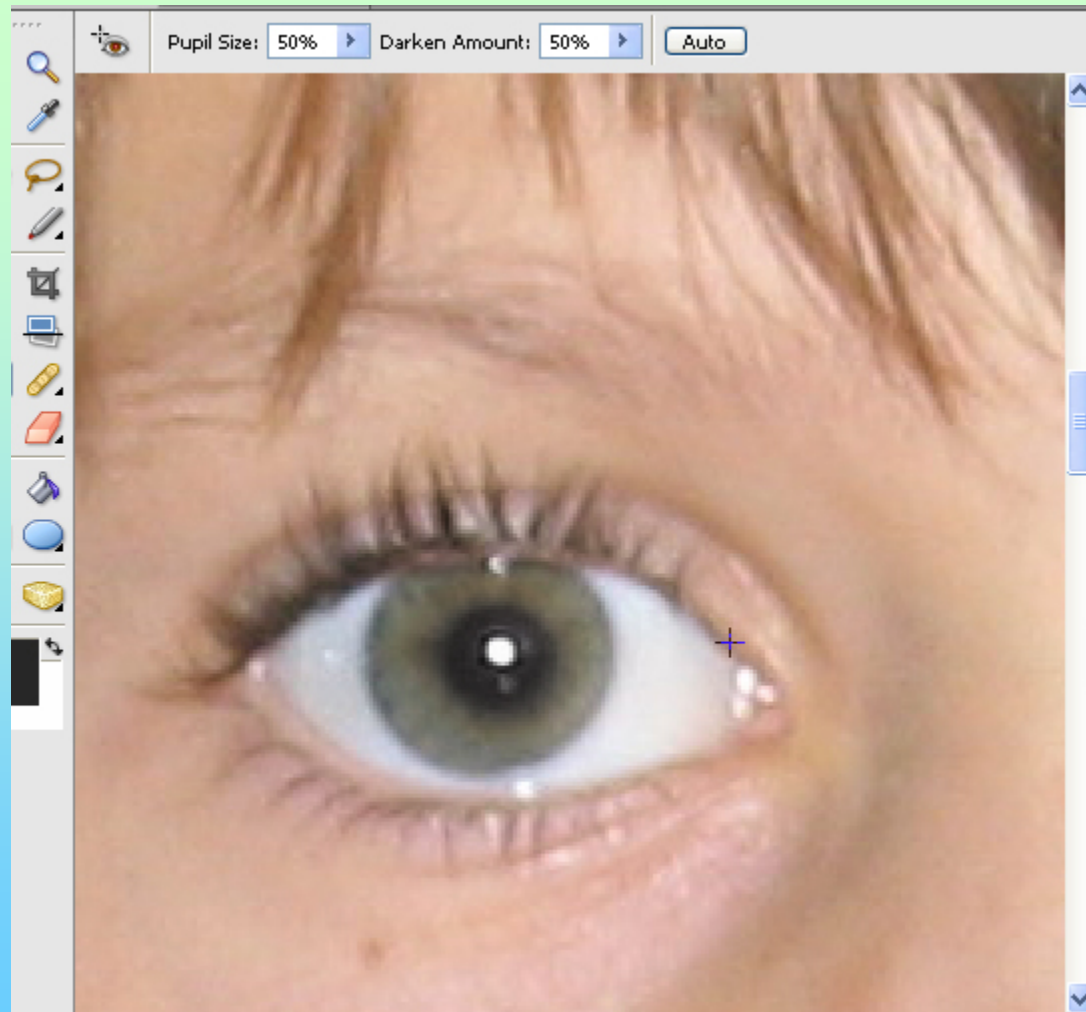

The Red Eye Tool

- The second method is definitely preferable
- Notice the difference in the samples

First method

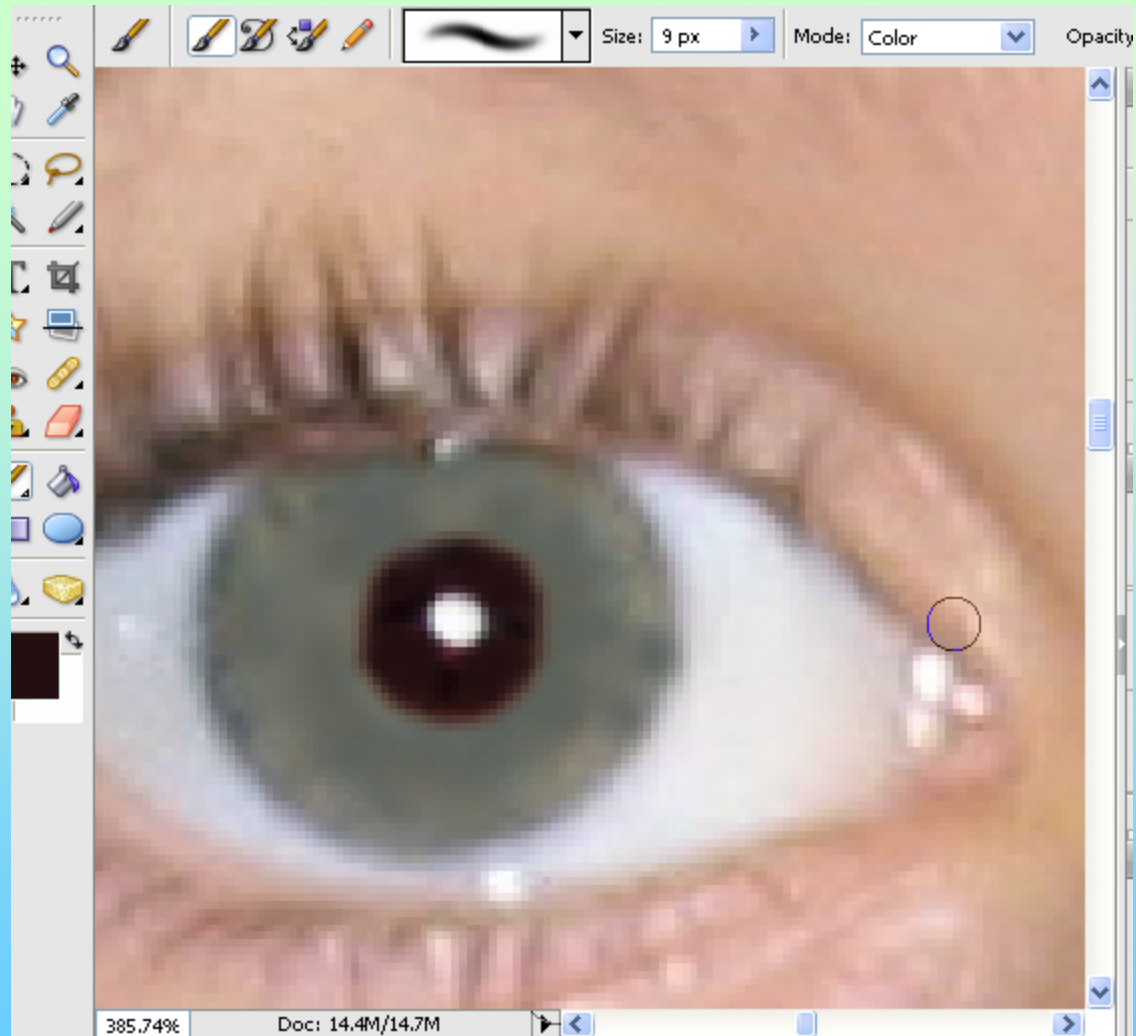

Second Method

A third choice

- You can enlarge the eye
- Use the eyedropper tool to pick natural color
- Click on the paint brush tool and change the picture by hand

Sample

That's it - That's all
